

# STONCHEM CIP

## REDIFINED, SAFE & LONG-LASTING FLOORS

Our cutting-edge approach addresses the difficulties presented by CIP spaces, which are areas where harsh chemicals and high temperatures come together. Combining two powerful systems, we provide a comprehensive solution to safeguard your floors and protect your products. With over a century of expertise, we deliver a turnkey solution that ensures safety, durability, speed of installation and a cleaner, more efficient workspace. Experience the future of food and beverage facility flooring with Stonhard.

### Products & Installation

We've combined our highly popular Stonclad UT, a urethane, textured floor system that resists traffic, impact and thermal shock with our Stonchem 800 series, a vinyl ester technology that withstands the chemical exposures common in CIP areas. These areas are notorious as a point of failure for our customers due to exposures of a wide range of chemicals often at elevated temperatures. Offerings like tiles with cementitious grout joints, polyurethane and epoxy coatings and floors don't last under these conditions leading to repairs and downtime. With its short installation time, it is perfect for the most difficult environments found in food and beverage facilities and can quickly restore service while ensuring long-lasting performance.

### The Performance You Require

Stonhard's Stonchem CIP floor system is a champion for your CIP space, defending against chemical attack, thermal shock and impact.

-  Chemical Resistant
-  Impact Resistant
-  Thermal Shock
-  Slip Resistance
-  High Strength
-  Seamless

### The Design You Desire

Stonchem CIP is a complete protection package designed exclusively for CIP spaces and used in CIP spaces around the world to keep facilities running safer and better.

### The Expertise We Provide

Stonhard has more than a century of experience manufacturing and installing seamless floors. We meet safety regulations and honour specifications. Our direct sales force along with the Architectural Design & Engineering Team and Construction Management Group work with you from product recommendation to final walkthrough.

### A Singular Solution

Stonhard works with the chemical companies around the world who produce the chemicals used in CIP spaces. It is this experience that led Stonhard to develop Stonchem CIP. It's a proven solution that is unmatched.
